

The Evolution of Agriculture

For thousands of years the Native Americans living in Northeastern Wisconsin survived living with nature and the fruits of the land. Over time, they learned to cultivate and harvest from the land to provide for their year round survival. The early pioneers came and harvested the forests and tilled new land, planting crops and raising livestock that they brought with them from their native lands. Since that time, agriculture has, and continues to go through significant changes and adaptation.

Those changes are, not only continuing, but are ever increasing as our rural areas are utilizing new and not so new technology in farming practices. This tour will take you through some of the most unique and diversified agricultural area of Wisconsin. You will discover new and not-so new four and two legged animals that have been introduced, or reintroduced to Northeast Wisconsin. Bring plenty of film, the ever – changing landscape will provide many photo opportunities.

8:00 a.m.	Tour guide meets you at hotel
8:30 a.m.	Travel through picturesque and historic rural landscapes and learn about our earliest history
9:00 a.m.	Visit the Dana Farm Recreation area along the Kewaunee River Valley and learn about Wisconsin's first settlers
